

## Patent Claims

1. A method for verifying the feasibility of a medical project with acceptance criteria (4) for patients, having the following steps:
  - target criteria (6) are set for the project,
  - a patient group (17) comprising potential patients is selected with the aid of the acceptance criteria (4) from a database (10) containing patient data (14) of patients,
  - the patient data (14) of the patient group (17) are evaluated with the aid of the target criteria (6) and a measure (21) of the feasibility of the project is determined.
2. The method as claimed in claim 1, wherein:
  - the acceptance criteria (4) are modified with the aid of the patient data (14) of the patient group (17).
3. The method as claimed in claim 1 or 2, wherein:
  - a patient model is compiled with the aid of the patient data (14) of the patient group (17),
  - the acceptance criteria (4) are modified with the aid of the patient model.
4. The method as claimed in one of the preceding claims, wherein:
  - the patient data (14) of the patient group (17) are used for carrying out the project.
5. The method as claimed in one of the preceding claims, wherein:
  - a clinical study is verified as the project.
